Vox ISM posts strong November license and new account sales results during a difficult economy

Vox signs nine new VOX Integrated Solutions Model customers

Toronto, Canada – December 8, 2008 – Today, Vox ISM, a Gold Certified Microsoft Partner, headquartered in Toronto, Canada, was pleased to announce that it posted a strong month of new account sales to Canadian companies in November, in spite of an increasingly difficult economy. During the month, Vox signed nine new customers, in a broad range of industries including: paper, packaged foods, construction, mining, medical equipment, electric motors, and winch and gear box solutions.

A critical element that proved instrumental in achieving such a strong sales month was Vox's recent deployment of the Vox Integrated Solutions Model (ISM). The ISM model focuses on ensuring that all employees have access to the mission critical business applications used to run businesses. Leveraging the Microsoft tagline, "Everyone gets it", Vox ensures that everyone gets to use the software, and that it is easy to use because it runs within the Microsoft Office applications the employees already know how to use. "There are essentially three reasons why we are continuing to post such positive sales results, even in a difficult economy, according to Jim Heaton, Vox ISM CEO.

- "First, our adoption of the ISM model is a huge differentiator. Typically only 15% of a company's resources have access to their ERP Business System, usually the finance and operations staff. We believe that for organizations to compete in the future, all employees must be tied into the same business system and share information at all levels of the company."
- "Second, our launch of Microsoft Dynamics NAV 2009 as our flagship solution coinciding with Microsoft's official release of the product this past month has enabled us to bring next year's technology to our customers today."

- “Third, we have a strong list of industry specific references in all major Canadian cities that provide proof of our ability to execute and help companies improve their operational performance.”

“We’re looking forward to continued growth and success as an organization as a result of these key facets of our business,” continued Mr. Heaton, “along with on-going growth in all of our vertical industry segments, including: General Business, Manufacturing & Distribution, Warehouse Distribution, Financial Services, Professional Services, Municipal Government, and Federal Government.”

Newly signed customers include:
